KORREK PRO CERAMIC TFC New generation coatings

KORREK PRO CERAMIC TFC coatings are designed for car care professionals. The products represent totally new ceramic TFC (Thin Film Coating) technology, which is developed in Finland. CERAMIC TFC coating forms a layer on the car paint surface that is extremely durable, glassy and yet elastic.

CERAMIC TFC coating provides the car with a deep and long lasting gloss and protects the paintwork effectively from wear. Treated surface effectively deflects e.g. water, dirt, and oils. Treatment protects the paint surface of the car against road salt and withstands solvent wash superbly. After treatment with CERAMIC TFC the car is much easier to keep clean and there is no need to wax the car any more.

For a new car, mechanical restoration of the car paintwork is usually not required, but with a used car it's needed almost without exception. Consult your KORREK PRO workshop.
